Topics

- Positional Number Systems
- Base conversion
- Special bases: 2,8,16
- Signed quantities
- Elementary arithmetic operations
- Binary Codes

Problems

| 1 | Build a table with all the possible 3 binary digits (bits). For each combination determine |
|---|--|
| | the respective decimal, octal, and hexadecimal representation. Repeat the exercise with 4 |
| | bits. |

| 2 | Compute t | the decimal | value of th | e following | unsigned | integer (| quantities: |
|---|-----------|-------------|-------------|-------------|----------|-----------|-------------|
| 4 | Compute t | me accimai | varue or m | c ronowing | unsigned | micgoi | quantitics. |

a) 00001111₂

b) 1347₈

c) DF5₁₆

d) 10100011₂

e) 7751₈

f) A7A2₁₆

g) 11111111₂

h) 2013₈

i) 40FF₁₆

3 Determine the octal, hexadecimal, and binary representations of the following non-negative integer quantities:

a) 1036₁₀

b) 7354₈

c) 16B5₁₆

d) 111100111₂

e) 7564₁₀

f) 6102₈

g) D3F9₁₆

h) 110101011₂

4 Compute the decimal value of the following rational quantities. Do not exceed the precision of the original representation:

a) 110110.1101001₂

b) 127.444₈

c) 2D.8₁₆

5 Determine the octal, hexadecimal and binary representations of the following rational nonnegative quantities. Do not exceed the precision of the original representation:

a) 13.25₁₀

b) 33.47₁₀

c) 123.3₁₀

6 Compute the following additions and check the results with decimal representation:

a) $101011110_2 + 000111111_2$

b) $125_8 + 17_8$

c) $125_{16} + 1A7_{16}$

d) $00111011_2 + AD_{16}$

| 7 | Compute the following subtractions and check the results with decimal representation: | | | | | |
|----|--|-----------------------------|---|------------------------|--|--|
| | a) 10101110 ₂ - 00011 | 1112 | b) 125 ₈ - 17 ₈ | | | |
| | c) 107 ₁₆ - DC ₁₆ | | d) AD ₁₆ - 00111011 ₂ | | | |
| 8 | Compute the signed complement 8 bit enco | | of the following quantities | es assuming a two's | | |
| | a) 11111110 | b) 00000000 | c) 11111111 | d) 00110011 | | |
| 9 | 9 Assume a two's complement 8 bit encoding. Determine, whenever possible corresponding two's complement 4 bit encoding: | | | | | |
| | a) 11111110 | b) 00000110 | c) 11111111 | d) 00110011 | | |
| 10 | 10 Assume a two's complement 4 bit encoding. Determine, the corresponding to complement 8 bit encoding: | | | | | |
| | a) 1110 | b) 0110 | c) 1000 | d) 0001 | | |
| 11 | Consider a 12 bit quantity represented as 7650 ₈ . Compute the corresponding signed decimal value assuming a two's complement 12 bit binary representation. | | | | | |
| 12 | 2 Show, whenever possible, the 8 bit binary representation of the following quantities assuming a two's complement encoding: | | | | | |
| | a) 45 ₁₀ | b) -13 ₈ | c) –F1 ₁₆ | d) 130 ₁₀ | | |
| 13 | 13 Compute the result of the following operations assuming an 8 bit two's compl representation. Verify the possible overflow cases. | | | | | |
| | a) $-1_{10} + 63_{10}$ | b) 11111 ₂ + 101 | 01_2 c) -11_{10} - 123_{10} | d) $54_{16} + 2E_{16}$ | | |
| 14 | Show in binary, octal, hexadecimal, and decimal the positive and negative limits of the representation of a 12 bit signed quantity | | | | | |
| 15 | Determine <i>m</i> , the minimum number of bits necessary to code 6 different objects? Suggest an example. Compute the total number of different codes that can be produced in this case | | | | | |
| 16 | Represent the following | ng numbers in BC | D ₈₄₂₁ code. | | | |
| | a) 111 ₁₀ | b) 125 ₈ | c) ABC ₁₆ | | | |
| | | | | | | |

| 17 | Build the Gray tables with 3 and 4 bits. Build another table with the first 4 and last 4 Gray codewords with 5 bits. | | | | | |
|----|--|--|---------------------------------------|--|--|--|
| 18 | Determine the Gray codewords corresponding to the following natural binary codewords: | | | | | |
| | a) 00001111 | b) 10011001 | c) 11111111 | | | |
| 19 | Determine the natural binary can a) 00001111 | codewords corresponding to the b) 10011001 | following Gray codewords: c) 11111111 | | | |
| | <i>a)</i> 00001111 | 0) 10011001 | <i>c)</i> 11111111 | | | |
| 20 | Compute the Hamming distance for the following codeword pairs | | | | | |
| | a) 10101010 e 01010101 | b) 11110000 e 11000011 | c) 10101111 e 10101111 | | | |
| 21 | | code, the Hamming distance for the | • • | | | |
