If your code has access to the Singleton class, then it's able to call the Singleton's static method. So wherever that method is called, the same abject is always instanted.

Real-World Analogy
The government is an excitate example of the Singitian patters. A country can have only one efficial government. Buy afters of the personal in the individual was the representation patterns. For the contract of the contract of the contract of the personal in change.

The Relations with Other Patterns

- A logated does not which be manifement two single-fraction single-fraction object is sufficient in most cases.

- Ingregated does not recommissing agreement to sense the monogent to state of all stated cases of the signature for most cases.

- Ingregated does not recommissing patterns for particular sense or patterns.

Abstract Factories Builders and Prototypes can all be implemented as Singletons.
